Page 696 Ethics and Issues: Read Is Beta Testing out of Hand?

What is Beta Testing? Would you participate in beta testing software on your pc? Why or why not? Are Software manufacturers being honest about their intentions in their beta testing? If not, in what way? Is it reasonable for software manufacturers to beta test their software for the general public? If so, for how long?

Beta testing is testing software before the public release so the company can make adjustments to it. I would participate in a beta testing because I feel special when I get to use something before it comes out. I think they are honest about their intentions. For more people could find more problems in the beta that the company can fix the problems. The beta should run for 1 to 2 months.
